At UChicago Medicine, we offer access to leading experts in a range of pediatric specialties. These physicians partner with our maternal-fetal medicine team to provide streamlined medical and surgical care during pregnancy, delivery and after birth. Find the list of pediatric physicians at [UChicagoMedicine.org/FNCC](https://www.uchicago.edu/medicine/fncc).

Coordinating Your Care

As our dedicated fetal and neonatal care coordinator, **Andrea Fischlowitz, MSN, APN, FNP-C, RN**, serves as your liaison to the physician specialists on your care team. She coordinates many aspects of care for all of our patients, including arranging appointments, managing medical records and ensuring you understand your care plan.

Choose Us for Your Baby's Care

We're ready to help you and your baby, from the day you begin your diagnostic tests to the day you deliver — and beyond.

COORDINATED TEAM OF PEDIATRIC SPECIALISTS

In preparation for your delivery, we'll coordinate a multidisciplinary meeting with your family and all of the specialists involved in your care. This meeting offers an opportunity to review your care plan in detail and answer any questions you may have.

Once your baby is born, we'll coordinate any needed medical or surgical follow-up with our pediatric specialists, including:

- » Anesthesiology
- » Cardiology
- » Cardiac surgery
- » ENT/craniofacial surgery
- » General surgery
- » Genetic specialists
- » Nephrology
- » Neurology
- » Neurosurgery
- » Orthopaedic surgery
- » Plastic & reconstructive surgery
- » Radiology
- » Urology

Services Offered

GENETIC COUNSELING

We provide clear, condition-specific genetic counseling to help you understand your baby's condition and plan of care.

Our licensed genetic counselors meet with families individually. By reviewing your family history and details about your current pregnancy, our counselors can provide you with information to help you decide whether to undergo additional testing. Our genetic counselors also work together to coordinate care with other providers as needed.

EXPERT FETAL IMAGING AND IMAGE-GUIDED PROCEDURES

UChicago Medicine specialists bring together more than 150 years of collective expertise in conducting and interpreting fetal anatomy ultrasounds, echocardiograms and MRIs. Our state-of-the-art facilities are equipped with the most sophisticated imaging technology capable of making definitive diagnoses of your baby's congenital conditions.

SPECIALIZED SURGICAL CARE

Our multidisciplinary team includes pediatric surgeons specialized in cardiology, urology, neurosurgery, ENT/craniofacial, general surgery and more. All of our specialists are available under the same roof, making them conveniently accessible for rapid consultations or emergencies.

STREAMLINED NICU CARE

We're one of the few hospitals in Illinois with a Level IV Neonatal Intensive Care Unit just steps away from our labor suites. This means we provide seamless care and transition to the NICU during high-risk deliveries of newborns experiencing the most complex and acute conditions or illnesses.

When the baby you're carrying faces critical health challenges, nothing matters more.

At the University of Chicago Medicine Fetal and Neonatal Care Center, our team of experts specializes in leading diagnostic techniques and treatments for complex fetal disorders. Our multidisciplinary team will evaluate and diagnose complex fetal conditions, counsel you about your options and provide a management plan including medical and surgical options. We recognize how stressful a pregnancy journey can be, particularly when uncertainty is involved. Our team provides personalized attention to ensure you understand the care plan for you and your baby and feel supported every step along the way.

We offer:

- » A dedicated coordinator to streamline appointments and communication with your care team
- » Important evaluations and procedures conveniently scheduled on the same day as your first appointment
- » An individualized care plan specific to your baby's diagnosis
- » Specialized NICU care after delivery of your baby
- » Follow-up and long-term care from a multidisciplinary team of pediatric physicians and specialists
